KUMPALI PRIVATE LIMITED

Technology that feels *useful* in real life.

# LOCAL BUSINESS.

## CONNECTED COMMERCE.

A connected vision for the people who make neighbourhood economies work—shopkeepers, wholesalers, makers, service providers and independent sellers.

### STROMULE

**OUR BUSINESS OS**

The operating workspace for everyday local business.

### PANGEABUY

**HYPER-COMMERCE**

A path to discovering and buying from the local market.

A company profile and product vision

Designed around a simple idea: local businesses should not be left behind by the digital shift.

A CONNECTED LOCAL ECONOMY

# Make local business work better—and get found.

Kumpali Private Limited is building a complementary product ecosystem: Stromule helps local businesses organise their operations, while Pangeabuy aims to make local products easier for customers to discover and purchase.

### STROMULE

**Business operations**

Organise product, order and day-to-day business information.

### PANGEABUY

**Local discovery**

Help customers find relevant participating local merchants.

## THE PROMISE

Better business information can make operations more dependable. With appropriate authorisation and working integrations, relevant information can also support local discovery—helping a merchant run their business and potentially reach more customers.

### Built for real work

Practical tools for businesses without a large IT team.

### Local by nature

Respect the relationships and knowledge local sellers already have.

### Connected by design

Link operations and discovery where capabilities allow.

WHAT LOCAL BUSINESSES FACE

# Hard work is not the problem. Disconnected systems are.

Many local businesses are rich in experience and customer trust, but essential information can be spread across paper, memory, phone calls, messages and separate files. As activity grows, these gaps become harder to manage.

01

### Information lives in many places

Prices in one notebook, supplier details in a chat, customer requests in memory.

02

### Orders can slip through the cracks

A missed message, unclear status or forgotten callback can cost a sale.

03

### Stock and availability are unclear

Customers ask for items staff cannot confidently confirm are available.

04

### The owner becomes the system

When one person holds all the knowledge, work slows if they are busy or away.

05

### Growth increases complexity

More SKUs, staff, suppliers, jobs and locations mean more hand-offs.

06

### Customers expect convenience

People increasingly expect fast answers, clear options and dependable fulfilment.

THE COMPETITIVE REALITY

Platforms such as Amazon, JioMart and Urban Company have trained customers to expect convenience. They will not automatically wipe out every local business—but avoidable friction can send customers to a more convenient alternative.

TECHNOLOGY SHOULD STRENGTHEN LOCAL ADVANTAGE

# Do not become a tech company. Become a better-run business.

The goal is not to copy a large marketplace. It is to protect what makes a local business special—trust, proximity, expertise and personal service—while removing repetitive friction around it.

1

**From memory → records**

Keep key information findable and less dependent on one person's memory.

2

**From firefighting → visibility**

Know what needs attention: an order, stock check, supplier update or customer follow-up.

3

**From invisible → discoverable**

Accurate business and product information can help customers find a relevant local option.

4

**From ad hoc → repeatable**

Simple workflows help staff handle common tasks more consistently.

5

**From guesswork → learning**

Records can reveal demand patterns, stock gaps and recurring customer questions.

THE PRACTICAL ADVANTAGE

A small business does not need every feature. It needs the right tools for its next stage—simple enough to adopt, reliable enough to trust, and useful enough to become a habit.

# STROMULE

**OUR BUSINESS OS**

A practical operating workspace for the people who keep local commerce moving.

DESIGNED FOR DIVERSE BUSINESS REALITIES

## One business OS. Many kinds of work.

Stromule is intended to help small businesses manage everyday operations in a more organised place—not only businesses with an IT team or a large budget.

### RETAILERS & SMALL SHOPS

Organise product details, prices, stock awareness, daily sales and customer orders.

### WHOLESALERS & DISTRIBUTORS

Keep product lists, customer orders, supplier details, price lists and dispatch follow-ups organised.

### SMALL MANUFACTURERS

Track customer orders, raw materials, production stages, job costs and delivery commitments.

### SERVICE PROVIDERS

Organise enquiries, bookings, estimates, job details, assignments and customer follow-ups.

### HAWKERS & STREET VENDORS

Maintain simple product and price lists and daily records without a complex setup.

### GROWING SMBs

Create shared records and repeatable processes across workers, teams or locations.

DESIGN PRINCIPLE

Start with the workflow that matters most. Keep setup manageable. Make the next action clear. Expand as the business grows.

# PANGEABUY

**HYPER-COMMERCE**

A customer-facing path to discovering and buying from the local market.

**LOCAL COMMERCE, MADE EASIER TO DISCOVER**

## What if customers could find it nearby?

A customer may need a charger, groceries, a school item, a replacement part or a household product today. A nearby merchant may have it—but the customer may not know where to look.

**01**

### MERCHANT MAINTAINS

Relevant business, product, price and availability details are kept current in Stromule, where supported.

**02**

### INFORMATION CONNECTS

With appropriate permission and an implemented integration, eligible information can support Pangeabuy listings.

**03**

### CUSTOMER DISCOVERS

Customers explore relevant participating local merchants and listed items.

**04**

### ORDER IS FULFILLED

The merchant serves the order according to the actual ordering, payment, pickup or delivery options available.

Accuracy matters: describe listings, live stock, payments, fulfilment, delivery and service-booking only according to what is actually implemented.

TWO PRODUCTS. A COMPLEMENTARY LOOP.

# Run better. Get discovered. Serve customers well.

Stromule and Pangeabuy are twin products of Kumpali Private Limited. They are designed to complement each other, not to be confused as the same product.

### STROMULE

Business records, products, orders and daily operations.

AUTHORISED INTEGRATION

### PANGEABUY

Local product discovery and purchase journey.

## ILLUSTRATIVE MERCHANT JOURNEYS

### Electronics retailer

Keeps charger listings and prices organised; customers may discover the shop through an eligible listing.

### Wholesaler

Organises bulk product information and order follow-ups; eligible listings may provide another route to buyers.

### Street vendor

Maintains a simple product list; with suitable onboarding and listing support, nearby customers may discover the offer.

### Small manufacturer

Organises products and orders while using a local discovery channel for eligible products.

The intended cycle: better business information supports useful discovery; discovery may create new orders; reliable records and fulfilment help turn those opportunities into trust.

A USEFUL DIGITAL JOURNEY

# Progress beats complexity.

Digital adoption should feel useful, not overwhelming. A business does not need to digitise everything on day one. Start with a repeated problem, create a reliable habit, then expand.

01

### PICK ONE PAIN POINT

Missed orders, unclear stock, forgotten follow-ups, messy supplier records or inconsistent job scheduling.

02

### SET UP THE BASICS

Create accurate business details and a useful product or service list with prices and contact information.

03

### RECORD DAILY ACTIVITY

Capture relevant sales, purchases, stock changes, orders, jobs or customer requests.

04

### KEEP DETAILS CURRENT

Assign responsibility for updating prices and availability; review stale or incorrect records.

05

### CONNECT TO DISCOVERY

Where available and authorised, make eligible information discoverable through Pangeabuy.

06

### MEASURE WHAT IMPROVES

Review response time, missed orders, stock accuracy, repeat purchases, fulfilment and time saved.

**TRUST IS PART OF THE PRODUCT**

Business and customer information should be accurate, protected and shared only in ways the merchant has authorised. Clear expectations build trust.

**KUMPALI PRIVATE LIMITED**

A more connected local economy.

# LOCAL BUSINESSES

## DESERVE TO MOVE FORWARD.

The future of local commerce should not require every small business to become a technology company. It should give them practical tools to run well, keep their local strengths and connect with customers more easily.

### STROMULE

**OUR BUSINESS OS**

Helps local businesses organise the work behind their business.

### PANGEABUY

**HYPER-COMMERCE**

Helps customers discover local products and participating merchants.

**ONE COMPANY. TWO COMPLEMENTARY PRODUCTS.**

Stromule supports the merchant workflow. Pangeabuy supports the customer discovery journey. Their connection depends on implemented integrations, merchant authorisation and accurate information.
